

Scientech TechBooks are compact and user friendly learning platforms to provide a modern, portable, comprehensive and practical way to learn Technology. Each TechBook is provided with detailed Multimedia learning material which covers basic theory, step by step procedure to conduct the experiment and other useful information.

Phonocardiograph (PCG) Techbook Scientech 2356 is used for Listening and observing the sound generated due to mechanical activity of heart i.e. pumping action of heart. Heart sound is a physiological phenomenon which provides diagnostic information in a frequency band ranges from 20 Hz to 1000 Hz. (Min. to Max. frequency limit). An electronic sensor (Stethoscope with microphone) is placed over the patient's chest. This techbook has a low noise and distortion-free amplifier, Band pass filter and main amplifier of proper pitch and intensity. The heart sounds can be heard clearly on the headphone. The PC interface through USB is provided so that the PCG unit can be connected to PC to obtain the Phonocardiogram waveforms of the patient in the PCG software.
